// Summary

Senior Fullstack QA Engineer with 6 years of experience in establishing testing processes (Python, Automation + Manual) and ensuring software quality. Specialize in early defect prevention and the automation of routine tasks. Proficient in Python and JavaScript with a strong technical foundation, including deep knowledge of Linux, Docker, and configuring CI/CD/CT pipelines in GitHub Actions. Seamlessly integrate into Agile environments and quickly adapt to new technologies. Currently expanding expertise in C++, Cryptography and Machine Learning.

// Technical Skills

CATEGORY	TECHNOLOGIES
Programming Languages	Python, JavaScript, C++
Systems & OS	Windows Server, Linux (Ubuntu Server, Debian, Arch Linux), macOS, Windows 11 Pro
QA Methodologies	Automation Testing, Manual Testing, API Testing (REST), UI Testing, Mobile Testing, E2E Testing, Continious Testing.
Test Frameworks & Tools	Pytest, Requests, Selenium, Appium, Postman, Allure, Test Management Systems (Jira, TestRail, TesIT).
DevOps & CI/CD	Docker, GitHub Actions, Git, Continuous Integration/Continuous Deployment/Continious Testing (CI/CD/CT) Pipelines.
System Administration	Linux Administration, VirtualBox, CLI (Command Line Interface).
Development	Django, ReactJS.
Security & Networking	Cybersecurity, Information Security (Infosec), Firewalls.
Advanced Technologies	Machine Learning (including Machine Learning for Software Testing): Scikit-Learn, XGBoost, LightGBM, CatBoost, Pandas, NumPy. Deep Learning & AI Frameworks: PyTorch, TensorFlow, Keras, JAX, Hugging Face Transformers.

// Professional Experience

Senior Fullstack QA Engineer | Upjet

Aug 2025 - Present (8 months)

- Architect and implement comprehensive testing strategies (Manual + Automation) for complex full-stack web applications.
- Design and optimize robust CI/CD/CT pipelines using GitHub Actions to ensure seamless and continuous product delivery.
- Manage and maintain complex, containerized testing environments utilizing deep Linux administration expertise and Docker.
- Spearhead the adoption of shift-left testing methodologies, preventing architectural defects during the early stages of development.
- Explore and integrate advanced approaches, such as Machine Learning concepts and data-driven testing, to optimize QA workflows and test coverage.

Middle Fullstack QA Engineer | Ignite

Dec 2021 - Aug 2025 (3 years and 9 months)

- Designed and maintained scalable UI and API automation frameworks from scratch using Python (Pytest).
- Containerized test suites and dependencies using Docker, significantly reducing environment setup time and inconsistencies.
- Automated routine infrastructure and testing workflows, integrating them directly into the deployment pipelines.
- Conducted deep functional, regression, and integration testing, actively troubleshooting backend issues via Linux CLI.
- Mentored junior engineers, established quality standards within the Agile team, and conducted code reviews for test scripts.

Middle Fullstack QA Engineer | TransferRoom

Oct 2020 - Nov 2021 (1 year and 2 months)

- Expanded automation test coverage by translating manual test cases into robust Python-based test scripts.
- Performed API testing and validation (REST) using Postman and Python, ensuring accurate data flow across microservices.
- Configured automated test executions and integrated reporting tools (e.g., Allure) to provide clear quality metrics to stakeholders.
- Collaborated with developers and product managers to define acceptance criteria and identify edge cases before feature implementation.
- Maintained detailed test documentation, test plans, and bug tracking life cycles using Jira.

Junior Manual QA Engineer | StarNavi

Feb 2020– Oct 2020 (9 months)

- Executed manual functional, regression, and cross-browser testing for web-based products to ensure high-quality releases.
- Authored clear, detailed, and reproducible bug reports, closely tracking defect life cycles.
- Assisted in building the foundation for test automation by writing basic UI/API scripts using Python.
- Created and maintained comprehensive test documentation, including checklists and test cases based on project requirements.
- Worked closely with the development team to reproduce, isolate, and verify fixes for reported issues in early development cycles.
